Each Shoe is correctly designed to make her feet grow right, combined with correct fitting is the secret of perfect, healthy feet in later years. Bring your daughter here for correct fitting.

NAVY INCREASES MAY NOT BE REALIZED

Appropriations Cover Only One Year's Building Program, Says League.

WASHINGTON, Sept. 29.—That the whole program of naval preparedness may yet go to pot and fail of realization unless American citizens maintain their alertness for years to come, is the warning sounded by Sea Power, the official publication of the Navy League, off the press tomorrow. It says:

Must Be on Guard.

"The possibility of failure to carry into execution the entire present building program must be guarded against. It is to be remembered that only a portion, about half, of the increase has been appropriated for—only those ships which are to be laid down this year—and that the balance of the program is to be spread over the following two years. It is to be expected that the small navy people and the peace-at-any-price fanatics will redouble their efforts to curtail preparedness as soon as conditions appear favorable to them, and it would not be surprising if such a movement should become active after the national election when preparedness issues will have lost much of their importance in party politics.

"A grave crisis in our international relations will probably arrive soon after the war. The crisis can be averted off or met successfully only if our fleet be ready.

Unequal to the Task.

"Owing to the great merchant tonnage now under construction, the available shipbuilding facilities, including the navy yards, are perhaps unequal to the task of building promptly the ships already provided for. If this should prove to be the case, steps should be taken to enlarge the shipbuilding plants with a view to undertaking the construction of the balance of the program not later than next year. If a crisis is to come, and we believe it is, we shall need to lay down all the ships on the program at the earliest possible date, for it must not be forgotten that it takes at least three years to build a capital ship.

"In the past the average citizen has been somewhat in the dark in his naval preparedness work because the task has been for the most part technical. It has related to the building of ships and in the training and increase in the number of officers and men. But hereafter a very large part of the problem will be non-technical. It will concern the industries of the United States; our shipping and preparedness in such matters as the development of resources to supply those chemicals, medicines, dyes and other materials for which we are now more or less dependent upon warring nations. In such matters non-technical men may be better qualified in many respects to judge and act than are those who are experienced in naval affairs. Consequently, from this time on there is need of redoubled vigilance on the part of every friend of preparedness that the nation's defenses be made a reality.

Ask Adequate Increase. "Heretofore, the league has concentrated its efforts largely upon obtaining an adequate increase of naval material and personnel, as these were the prime necessities. From this time on, its activities will be broadened to cover matters of policy having to do not only with the size and efficiency of the navy, but also with the upbuilding of our merchant marine, industrial preparedness, the development of a better comprehension of world problems and international relations, and the inculcation of a higher spirit of nationalism and patriotic endeavor.

"Perhaps its most important work will be that of combating the inevitable loss of public interest in preparedness when the war is over."

STRONG DRINK

Manufacture and Sale in Mexico Are Ordered to Be Stringently Regulated.

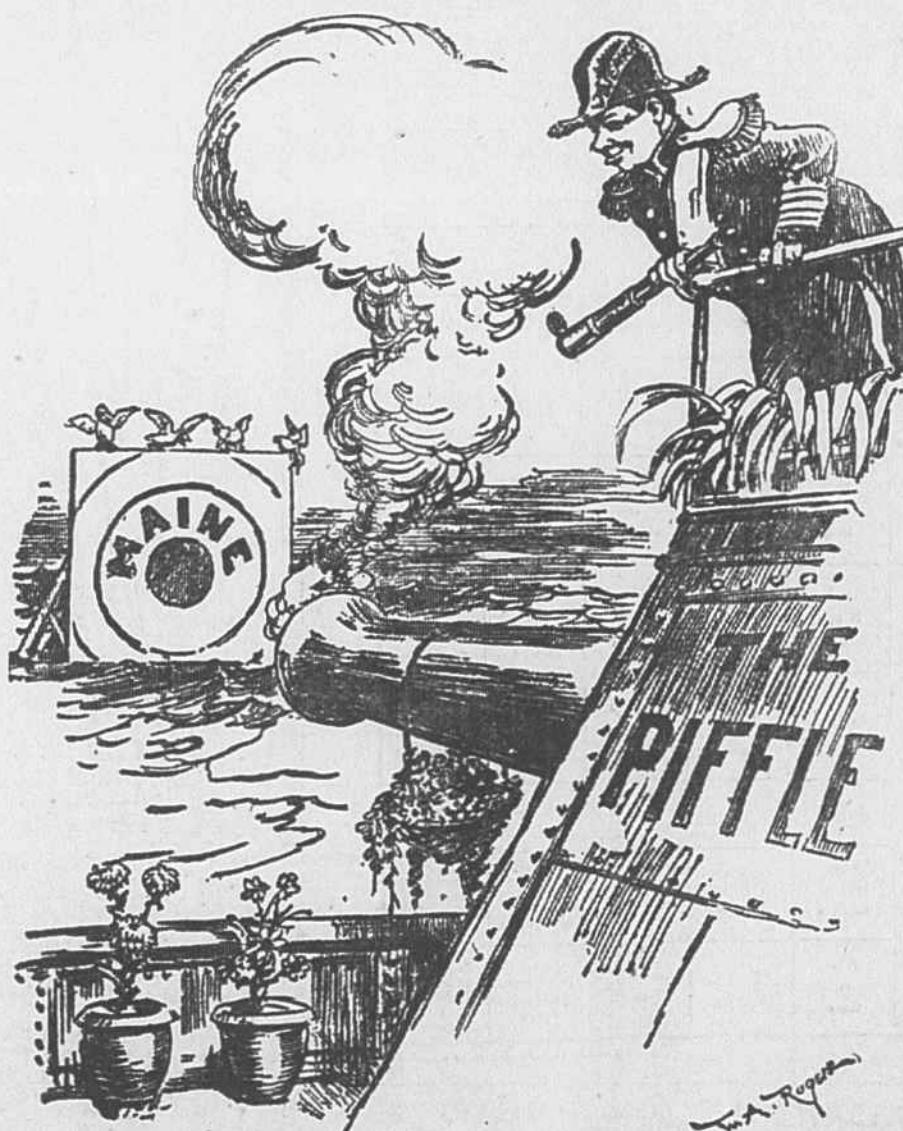

MEXICO CITY, Sept. 29.—Stringent regulation of the manufacture and sale of pulque, the principal strong drink of Mexico, is ordered by First Chief Carranza in a decree which has just been promulgated. The beverage is made from the juice of the maguey cactus. The new regulations double the tax on the bringing of pulque into towns, and require manufacturers of it to record with proper authorities all details concerning their business.

The decree provides that no factories may be established more than forty kilometers from the town in which the product is to be sold. This is to insure that the pulque arrives quickly and in good condition.

Should the product spoil in process of fermentation, the manufacturer must notify the authorities and establish that it has been thrown out or used to make alcohol.

It is provided that the maguey lands also must be used to raise other agricultural products as well as maguey.

A CLEAN SCORE SO FAR!

"The Result in Maine Is a Democratic Victory."—Josephus Daniels.

Cartoon By ROGERS In New York Herald.

HOW MANY STEPS DOES A MAN TAKE TO A MILE?

LONDON, Sept. 29.—How many steps does the average person take to the mile? The pace of British infantrymen is said to be the longest of any infantrymen in the world. The Russians' pace is the shortest, being but twenty-seven and one-half inches, and the Germans do thirty-one inches. But your own pace, what of it? It depends on your height, say scientists. Take your eyebrow height, halve it and that represents your pace. You will find it to be somewhere between thirty inches and thirty-two inches, so that you will need between 2,000 and 2,100 paces to the mile.

WEARING BALL AND CHAIN, PRISONER MAKES ESCAPE.

JEFFERSON CITY, Sept. 29.—Wesley Oliphant, convict of the state penitentiary from Henry county, had only four months of a two-year sentence to serve, but prison officials discovered here recently that he had escaped for the second time this month. The first time he was captured within a few hours and as punishment was put to work in the prison quarry with a ball and chain attached to his leg. This is the first time in the history of the institution that a man has escaped who carried a ball and chain.
